

The background of the slide is a light gray gradient. It is decorated with numerous realistic water droplets of various sizes. Some droplets are large and prominent, while others are small and scattered. They are primarily located in the upper left and lower right corners, with a few smaller ones near the center text.

OVERVIEW

In today's digital age the use of the internet and technology has become an essential part of student's daily lives . However, many users lack proper awareness about safe and responsible usage. This project focuses on promoting digital literacy which includes the ability to use digital tools effectively , evaluate online information and stay safe from cyber threats . This project includes introduction of digital literacy and how to build a digital portfolio as a student on different types of websites. How to use coding platforms and how to make a google forms is also included in this project. This project tells us about the email etiquette and how to draw a professional emails using different types of examples , do's and don'ts checklists for social media, case studies about cybercrimes and their preventions.

Digital literacy is essential for every student in today's world. This project helps in building awareness about safe, responsible, and effective use of digital technologies, thereby reducing the risk of cyber threats and promoting a secure digital environment.

TASK 1

- As a student digital ambassador, I created a single infographic resource to spread awareness about digital literacy among my batchmates. I used canvas to design the poster because it is user-friendly and provides a variety of templates, icons, and design elements.
- The design highlights the meaning of digital literacy and its importance in today's digital world. It includes key points such as safe internet practices, responsible social media usage, identifying phishing scams, and protecting personal information. I also used simple icons and short bullet points to make the content visually appealing and easy to understand. The aim was to ensure that even someone with basic knowledge of technology could quickly grasp the message.
- One challenge I faced was selecting the most important information and fitting it into a single page without making it look cluttered. However, this process was also interesting because it helped me improve my design and content selection skills. Overall, creating this resource enhanced my understanding of digital literacy and its real-life importance.

TASK 2

- To build a professional digital presence, I created my portfolio on GitHub, LinkedIn, and stack overflow. Each platform serves a unique purpose in my academic and professional growth.
- GitHub is used to showcase my projects, code, and technical skills. It acts as a portfolio where I can demonstrate my practical knowledge in programming and AI/ML. LinkedIn is used for professional networking, where I can connect with peers, seniors, and recruiters, as well as share my achievements and learn about opportunities. Stack overflow helps in improving my problem-solving skills by allowing me to ask questions, find solutions, and contribute answers to programming-related queries.
- Over the next four years, I plan to regularly upload my projects on GitHub, build a strong professional network on LinkedIn, and actively participate in discussions on stack overflow. This will help me enhance my skills, gain visibility, and prepare for internships and future career opportunities.

TASK 3

- In this task, I explored both a coding practice platform and a cloud collaboration tool to strengthen my academic skills. I used hacker rank for practicing programming problems and improving my problem-solving ability. On this platform, I worked on basic to intermediate coding questions, especially in areas like loops, arrays, and logical thinking. It helped me understand how to approach problems step by step and improve my coding efficiency.
- For collaboration and data collection, I used google forms. I created simple forms to collect responses, which can be useful for surveys, quizzes, and feedback collection in academic projects. This tool made it easy to organize data automatically and analyze responses quickly.
- Both of these tools will be very helpful in my academic journey. Hacker rank will continuously improve my coding skills, which are essential for placements and technical interviews. Google forms will help me in project work, research, and teamwork by making data collection and collaboration more efficient. Together, these platforms enhance both my technical and organizational abilities.

TASK 4

- Poor digital communication can lead to serious misunderstandings. For example, imagine a student emailing a professor with a vague subject like “important” and writing a short message such as “send me the details ASAP.” This message sounds rude and unclear, and the professor may ignore it or misunderstand the request. As a result, the student might miss important instructions or deadlines.
- This situation could have been handled better by following proper email etiquette. The student should use a clear subject line like “request for assignment details,” begin with a polite greeting, and explain the request clearly and respectfully. Using complete sentences, a courteous tone, and proper closing would make the communication more effective. Good digital communication ensures clarity, avoids confusion, and helps maintain a professional relationship.

TASK 5

- While researching ransomware, what surprised me the most was how easily attacks can start from something as simple as clicking a suspicious email link or downloading an unknown attachment. I learned that even large organizations have suffered major losses due to ransomware attacks like WannaCry ransomware attack, which spread rapidly and affected thousands of systems worldwide. It showed me that no one is completely safe if basic precautions are ignored.
- As a result, one habit I will personally change is being more careful with emails and downloads. I will avoid clicking on unknown links, verify the sender before opening attachments, and regularly update my system and antivirus software. This small change can significantly reduce the risk of falling victim to cyberattacks and help maintain digital safety.

CONCLUSION

- Through this project, I gained a strong understanding of essential digital skills required in today's academic and professional world. Creating profiles on platforms like GitHub, LinkedIn, and stack overflow helped me build a professional online presence. I also improved my coding and problem-solving skills using hacker rank and learned how to collect and manage data efficiently through google forms.
- Additionally, I developed better communication skills by understanding proper email etiquette and the importance of professional online behavior. Learning about cybersecurity threats like ransomware made me more aware of online risks and safety practices.
- Overall, this project enhanced my technical, communication, and digital awareness skills. It has prepared me to use online tools effectively, collaborate with others, and maintain a secure and professional digital identity throughout my academic journey and future career.
